Glass Spheres Control (244  $\mu\text{m}$  nominal)

LOT #: 02092023

EXPIRATION DATE: 13-May-2027

# Particle Size & Shape Control Assay Sheet

## Glass Spheres Control (244 $\mu\text{m}$ nominal)

### Sample Description

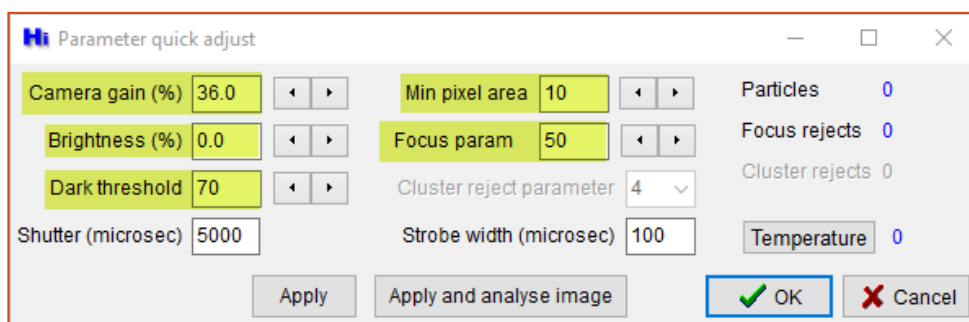

This Particle Size & Shape Control Material is a dry glass sphere with a controlled particle size reported through the Equivalent Circular Area Diameter (ECA Diameter) measure. The ECA Diameter reports particle size assuming that the particle is circular or spherical in shape. The nominal size (Mode) for this control sample is 244  $\mu\text{m}$ .

### Sample running instructions:

It is recommended that the Control be suspended in water prior to analyzing in the Particle Size & Shape Analyzer.

- Select the **Image** tab and click on the icon  (Parameters quick adjust)
- Enter the following Image Analysis Parameters into the software:

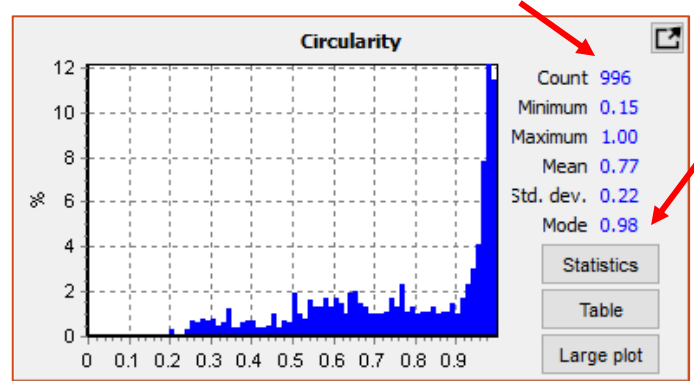

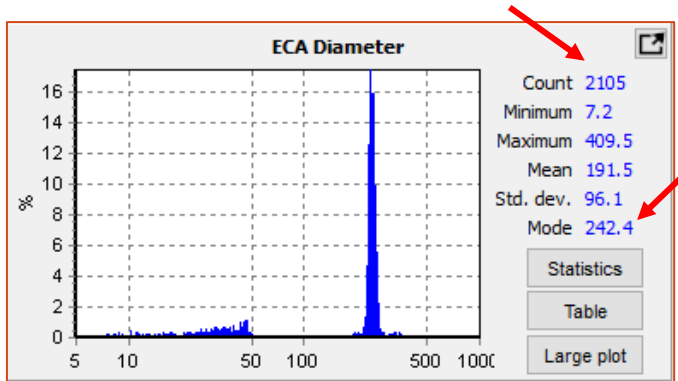

Camera Gain	36 %
Brightness	0 %
Dark Threshold	70
Min Pixel Area	10
Focus param	50

- Click on **Apply**, then **OK**.

**Results:**

Below is a histogram and data showing the ECA Diameter in Volume Weighted distribution as well as Circularity.

<u>Description</u>	<u>Results</u>
Measurement type	ECA Diameter/Circularity – Volume Weighted
Expected Size Results	MODE: 244.74 $\mu\text{m}$ +/- 6%
Expected Circularity results	MODE RANGE: min 0.920 - max 1.000
Lot #: 02092023	EXPIRATION DATE: 13-May-2027
